SUMMARY

I am a fourth-year PhD Student in Computer Science at Texas A&M University, advised by [Prof. James Caverlee](#). My research rethinks spoken language understanding by modeling disfluency, spontaneity, and variability as fundamental features of human communication. I aim to develop next-generation conversational AI that thrives under real-world conditions — systems that generalize across speakers, domains, and contexts to power scalable, speech-centric applications in information access, recommendation, and decision support.
